predicting hemodynamic instability
**The Hypotension
Prediction Index (HPI)**

Dr. M. Ignacio Monge García
Hospital SAS Jerez, Spain

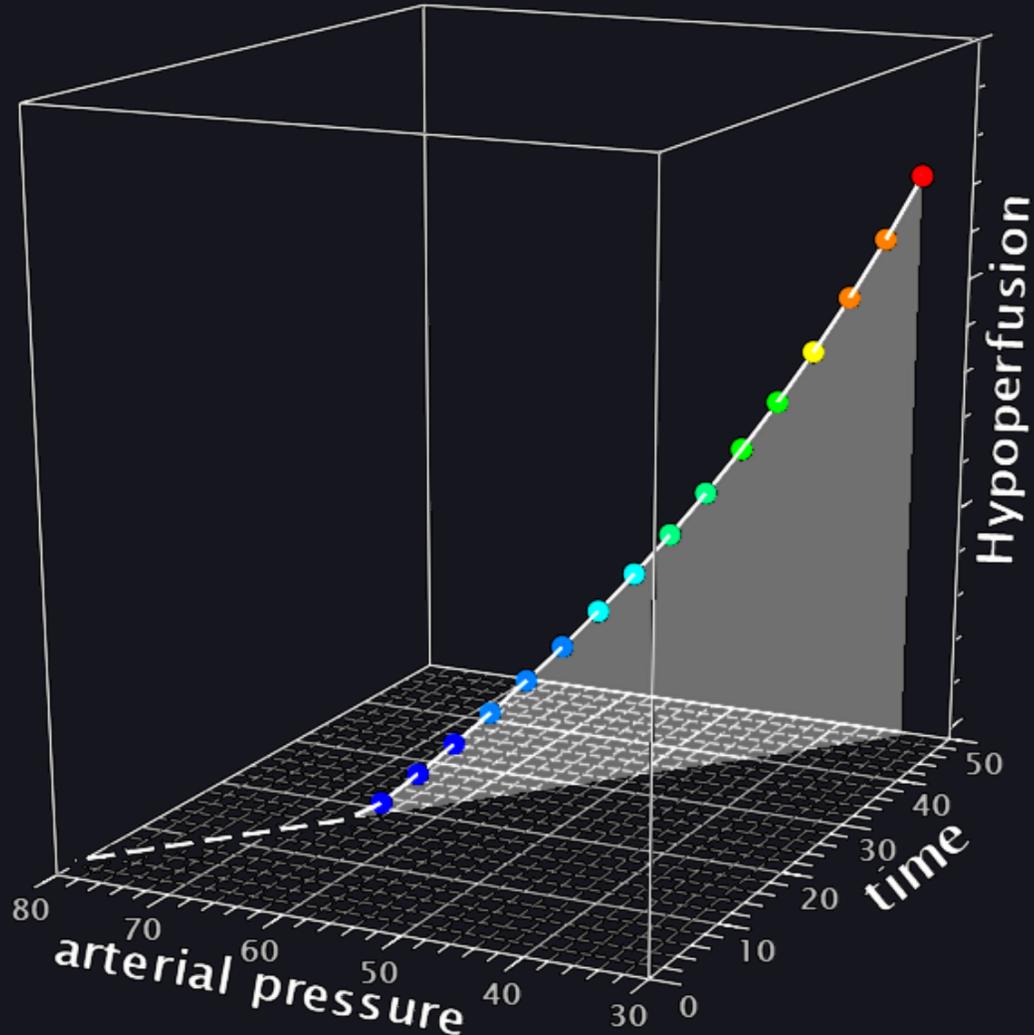

Arterial **hypotension** and organ hypoperfusion

Arterial **hypotension** and organ hypoperfusion

Arterial **hypotension** and organ hypoperfusion

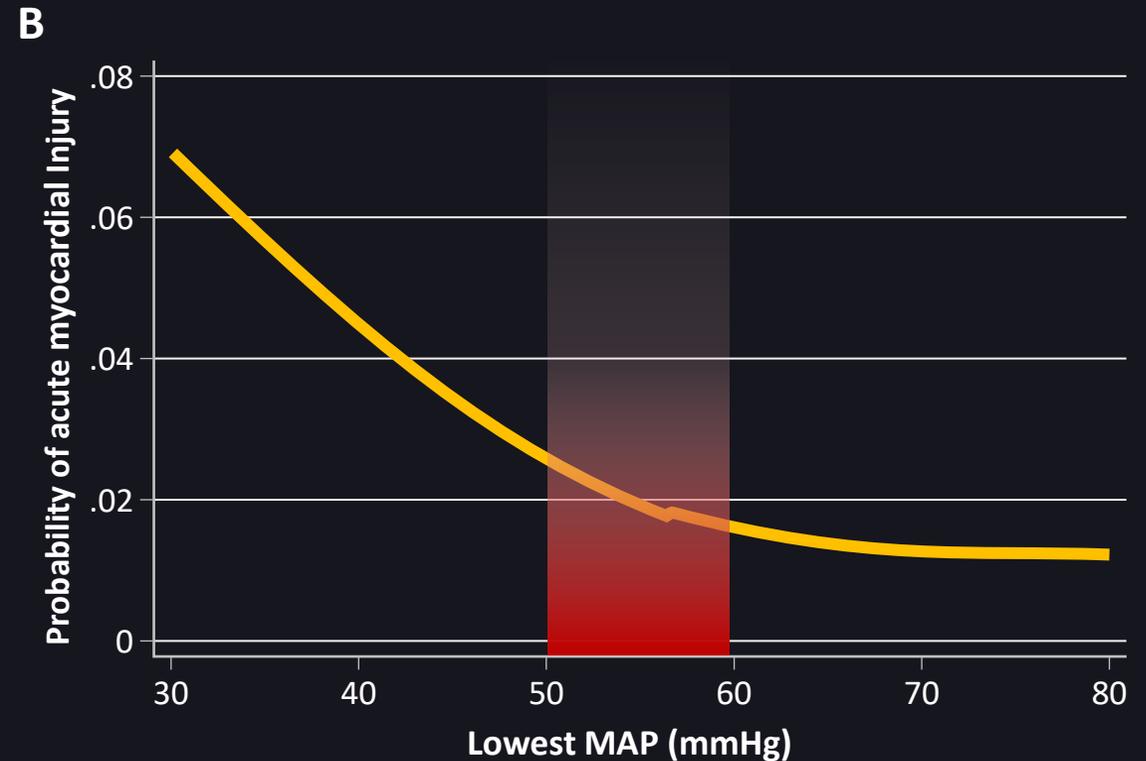

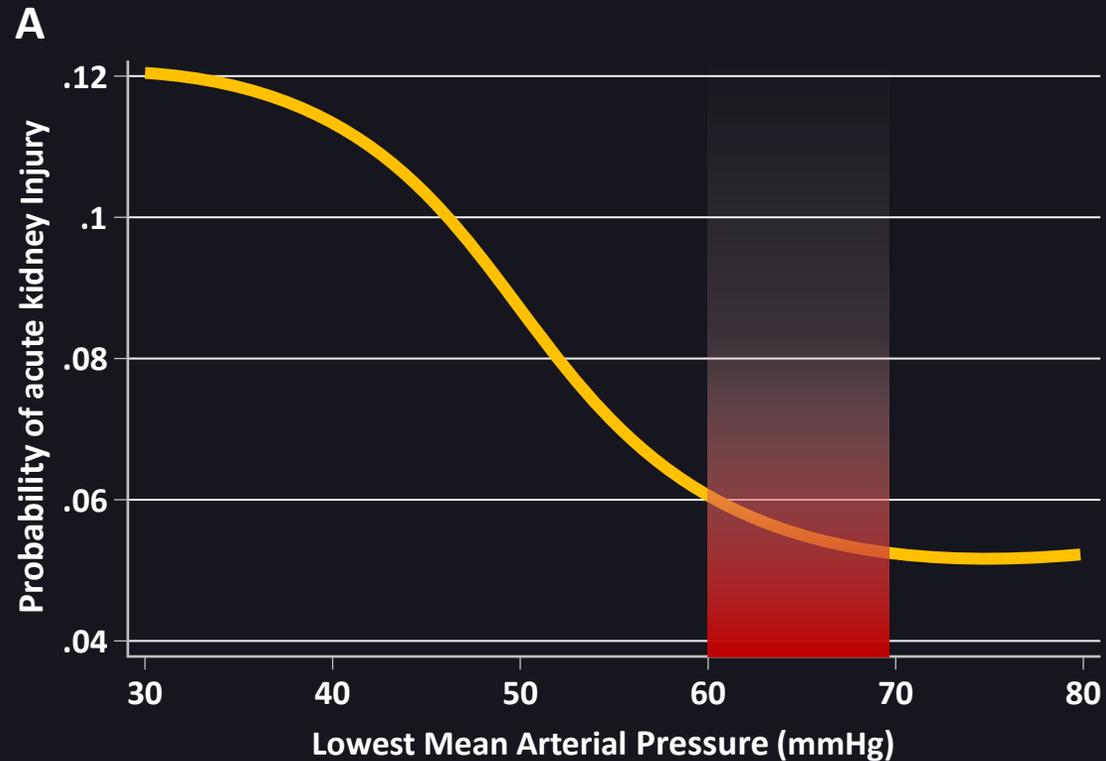

HYPOPERFUSION IS A FUNCTION OF TIME AND THE PERFUSION PRESSURE.

THE LONGER AND MORE SEVERE HYPOTENSION, THE MORE LIKELYHOOD ORGAN HYPOPERFUSION

Relationship between intraoperative **arterial pressure** and clinical outcomes after noncardiac surgery

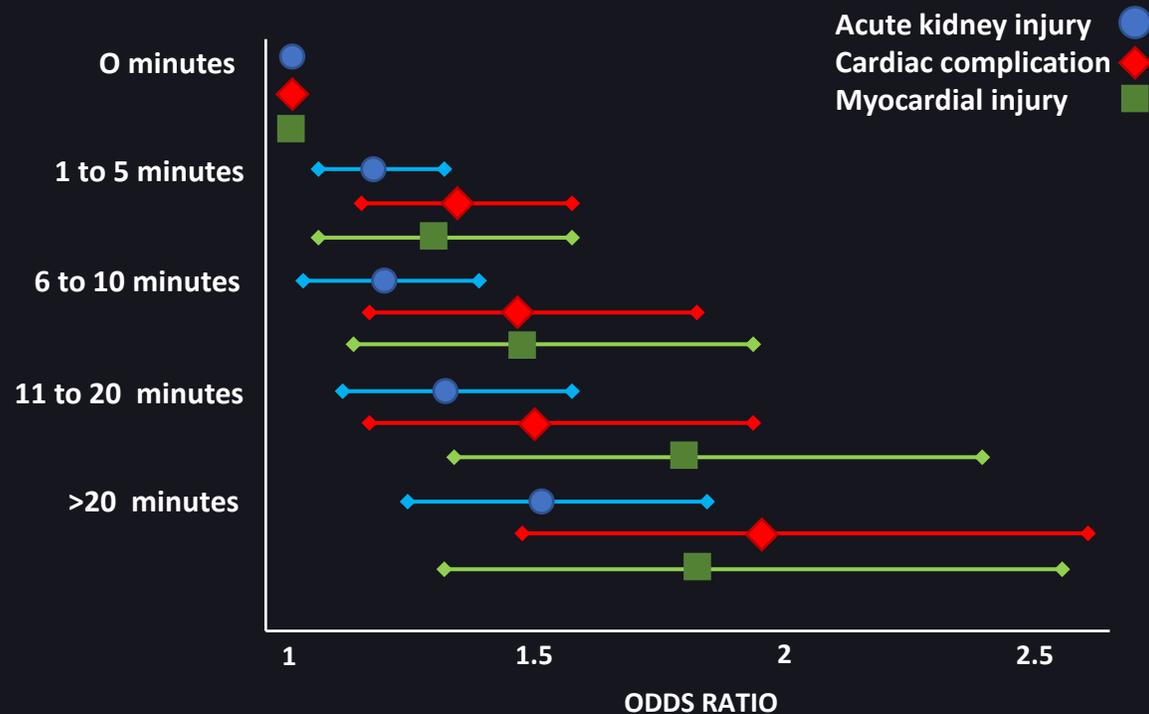

Toward an empirical definition of Hypotension

Predicted probability of (A) acute kidney injury and (B) myocardial injury by lowest mean arterial pressure (MAP) experiences during surgery

Relationship between intraoperative **arterial pressure** and clinical outcomes after noncardiac surgery

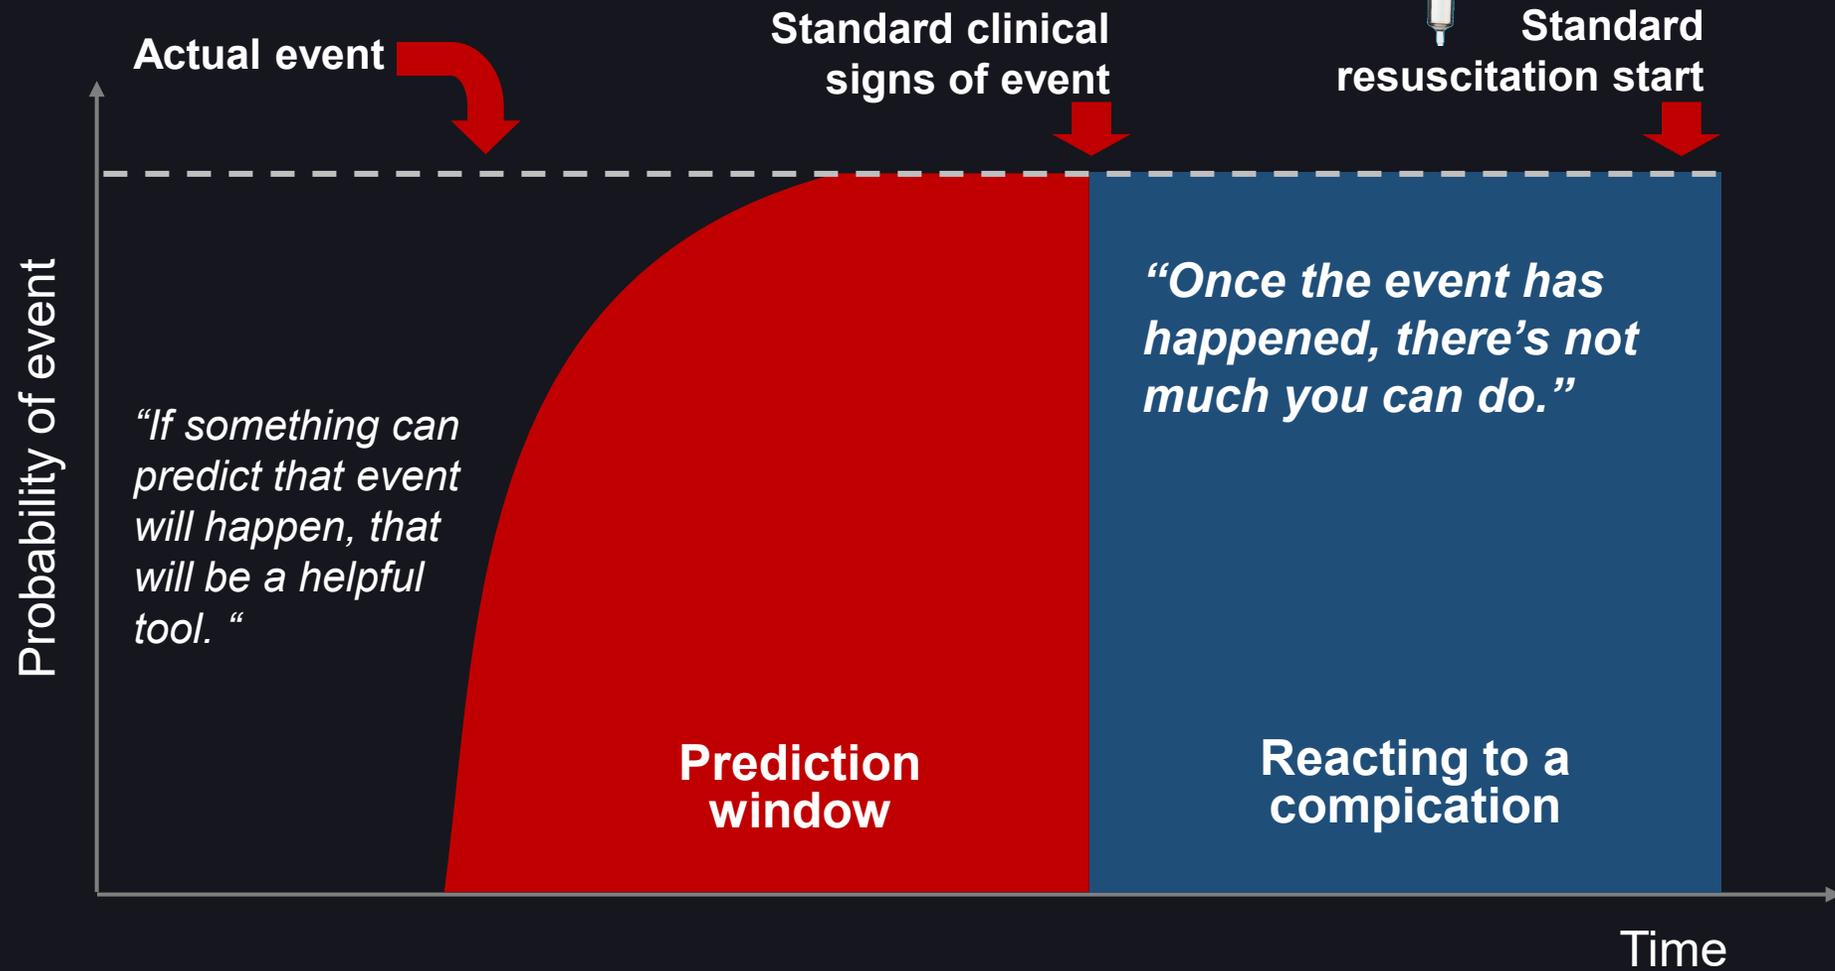

Toward an empirical definition of Hypotension

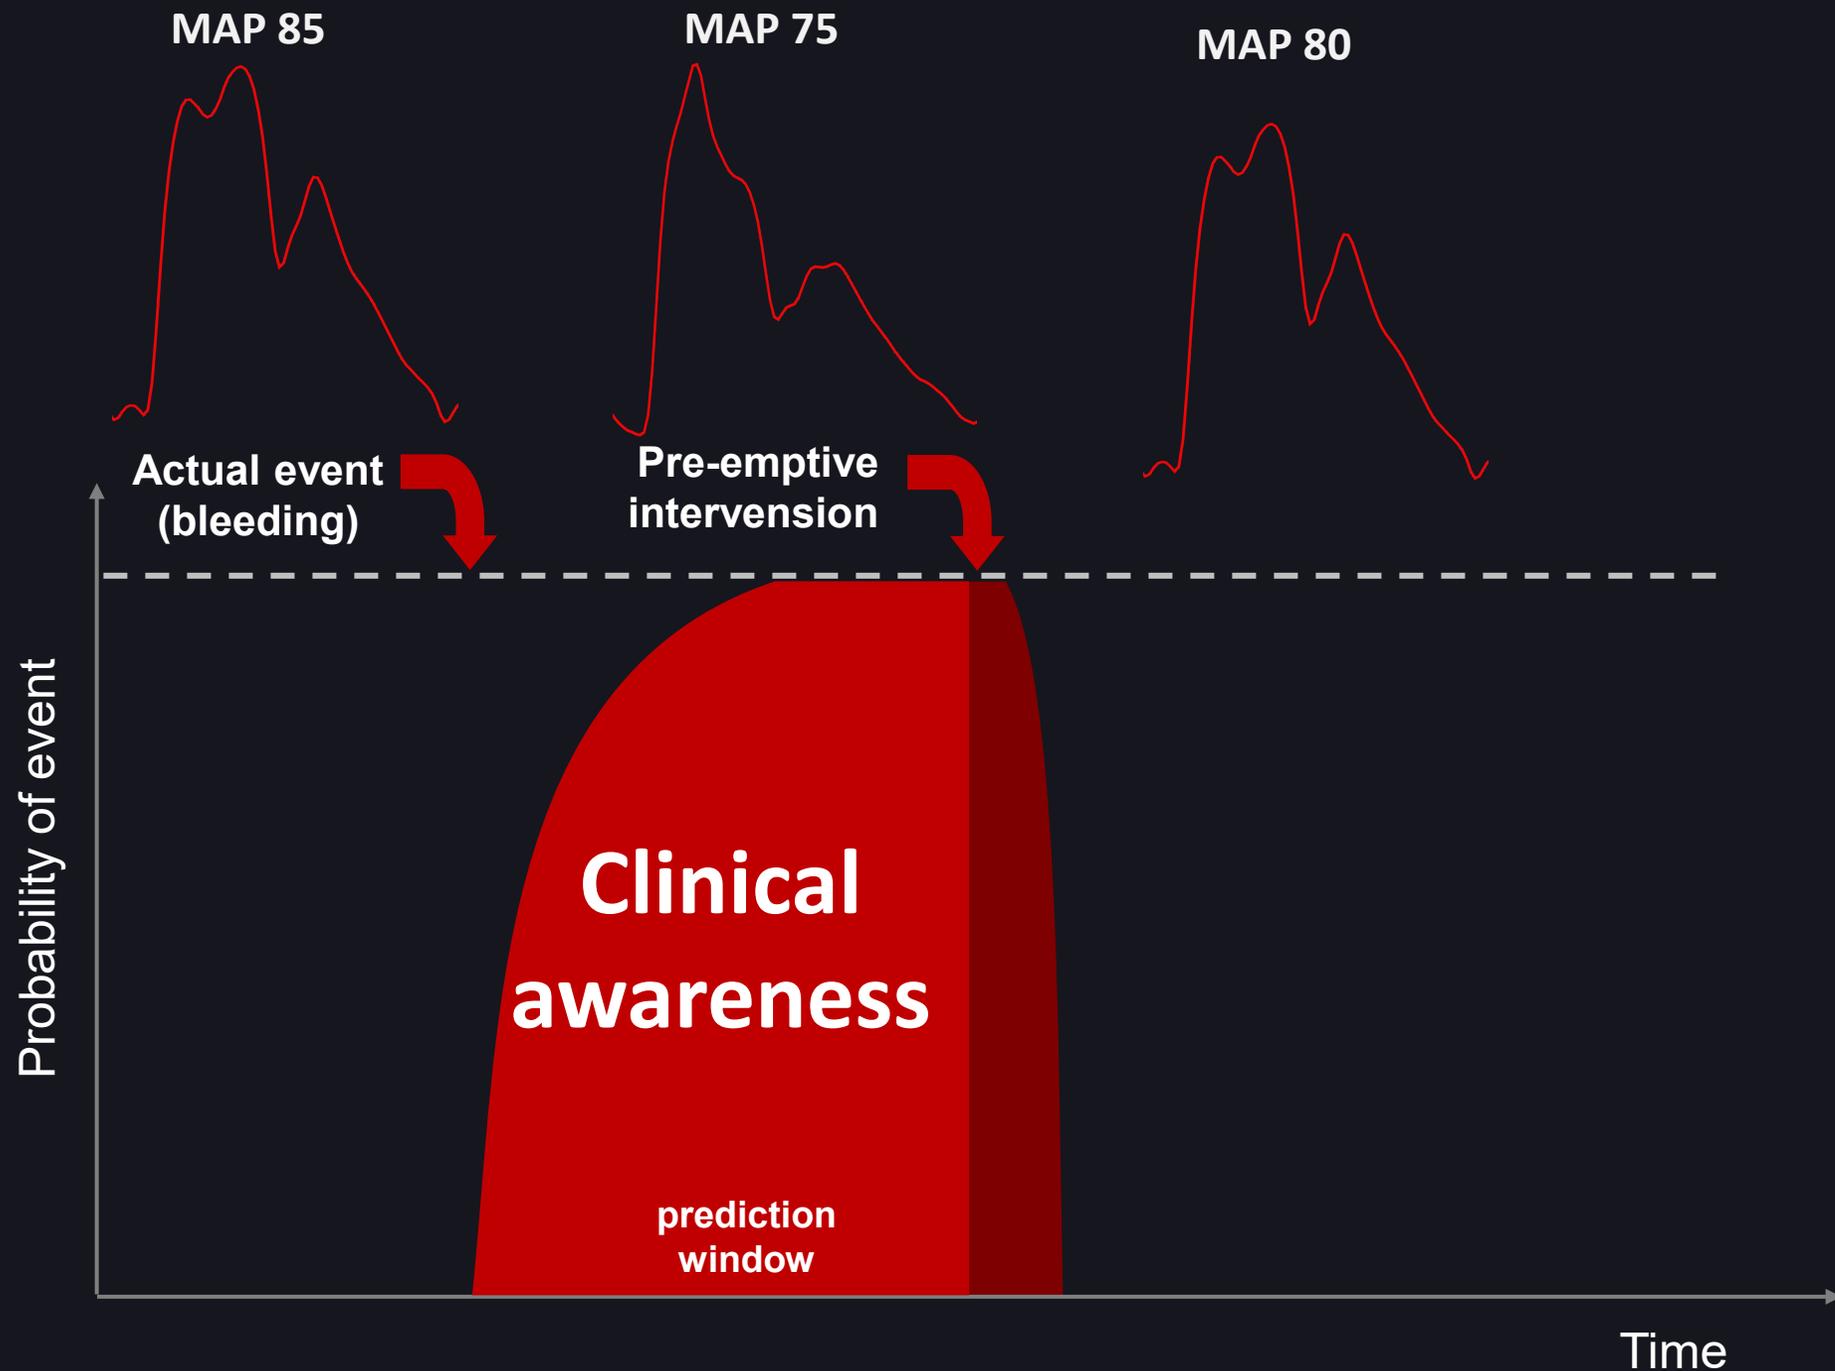

Adjusted odds ratio for acute kidney injury, cardiac complications, and myocardial injury by time spent with a mean arterial pressure < 65 mmHg

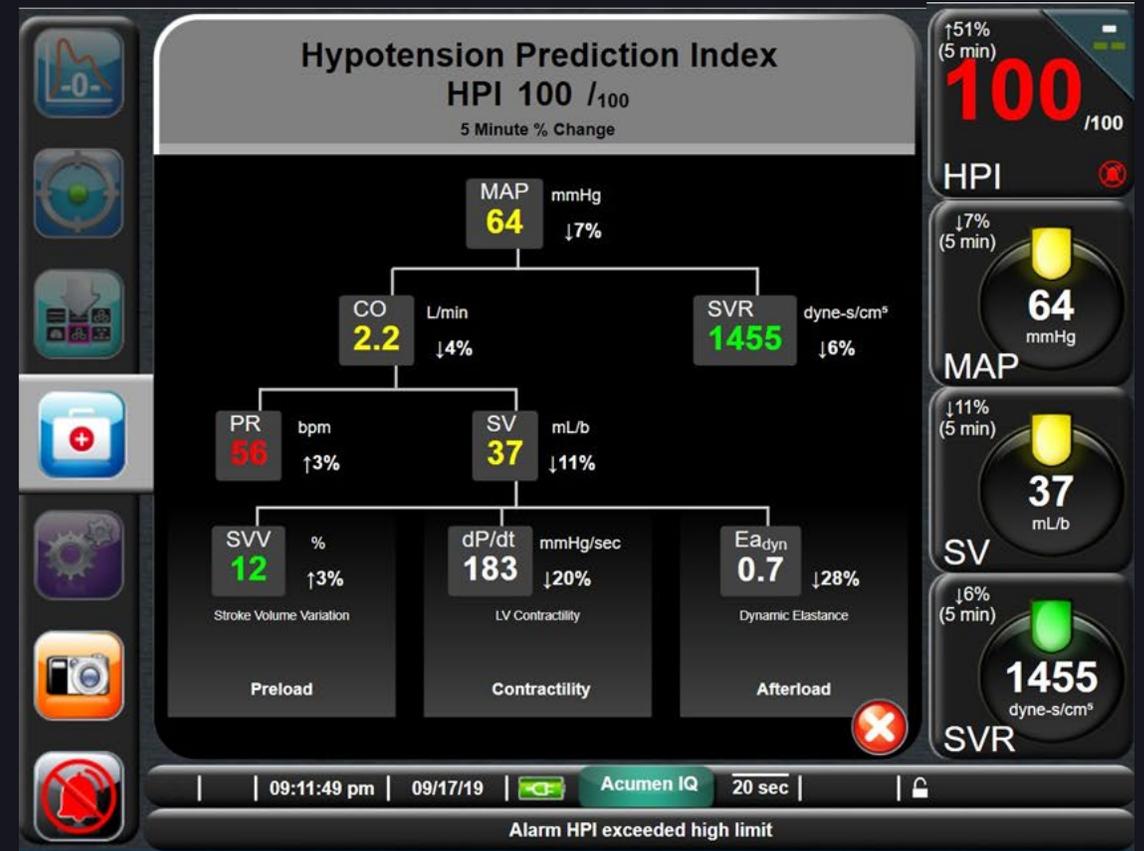

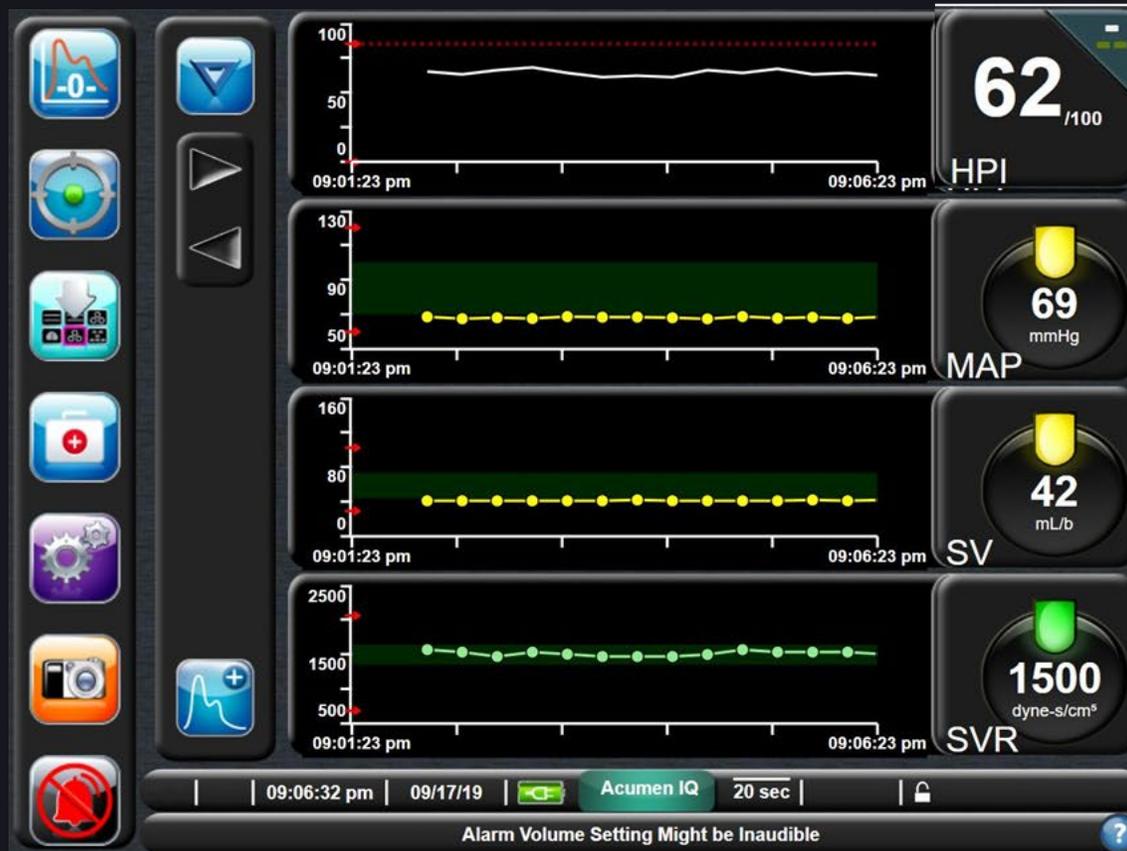

Walsh M et al. Relationship between Intraoperative Mean Arterial Pressure and Clinical Outcomes after Noncardiac Surgery: *Toward an Empirical Definition of Hypotension*. ANESTHESIOLOGY, 119(3), 2013. (33,330 noncardiac surgery patients)

Monk TG et al. Association between intraoperative hypotension and hypertension and 30-day postoperative mortality in noncardiac surgery. ANESTHESIOLOGY 123(2); 2015 (18,756 noncardiac surgery patients, 6 hospitals)

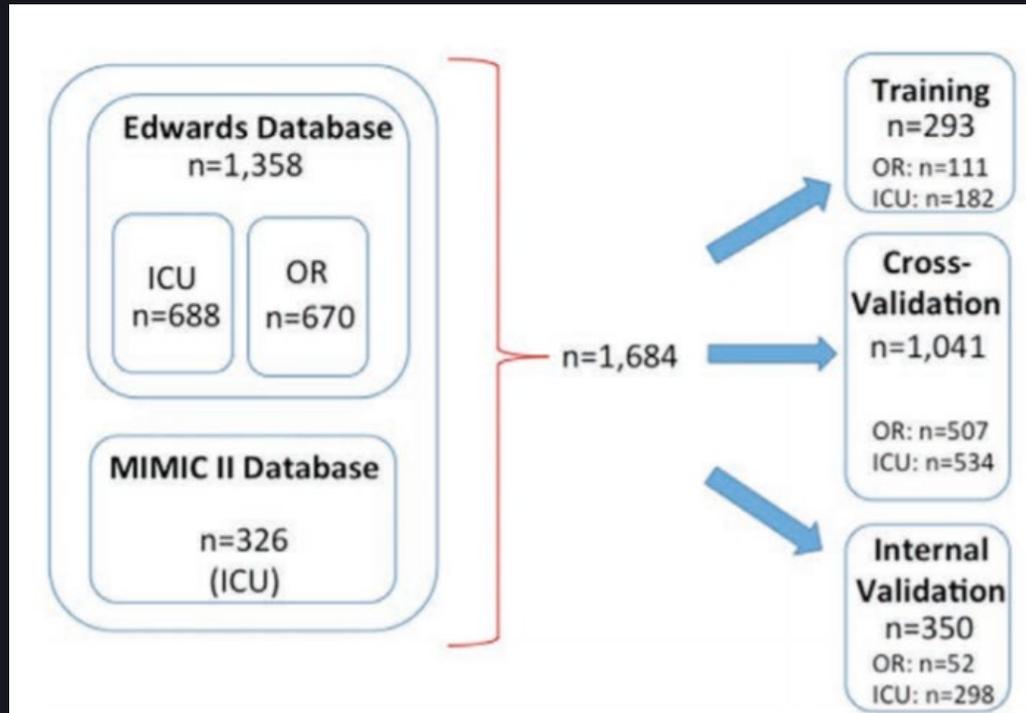

Hypotension Prediction Index (HPI) predicts the occurrence of arterial hypotension

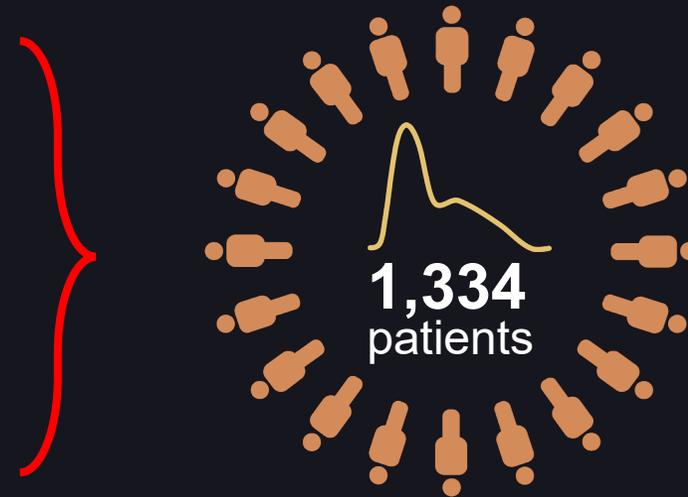

**HPI is not a physiological parameter but a number.
The higher the number greater the likelihood of hypotension occurring**

HPI algorithm was developed using machine learning techniques on a large patient database

The database consists of blood pressure waveforms from patients in various clinical settings including the ICU and OR presenting with a broad set of clinical conditions.

1,334 patients

Number of events: 59,376
Total event time: 367,550 min
Cardiac cycles: 31.45M

Number of non-events: 144,045
Total non-event time: 1,126,573 min
Cardiac cycles: 101.9M

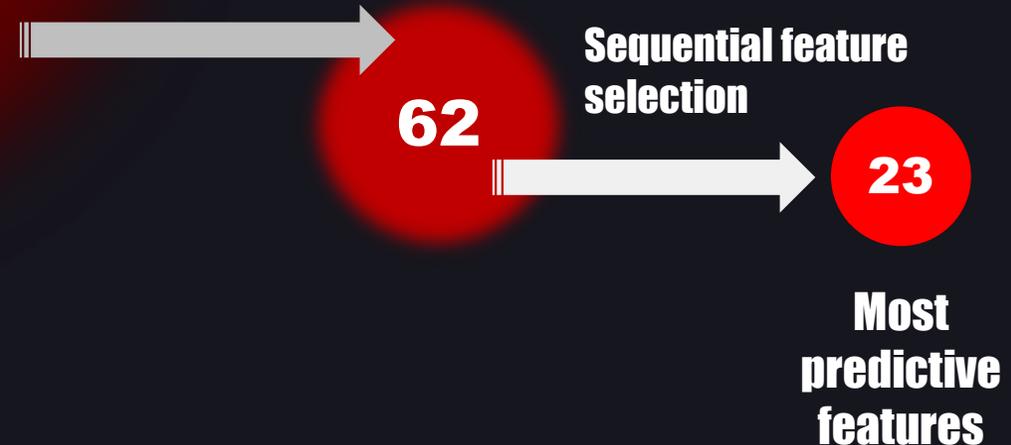

Machine learning techniques to build HPI algorithm

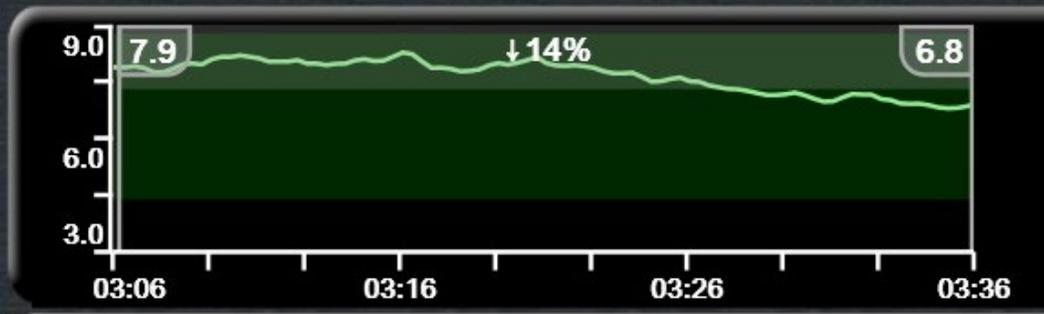

1. Features in a single waveforms
2. Measures of complexity and variability
3. Compensatory mechanisms such as baroreflex and cardiopulmonary reflex
4. Interactions between features

Hypotension Prediction Index

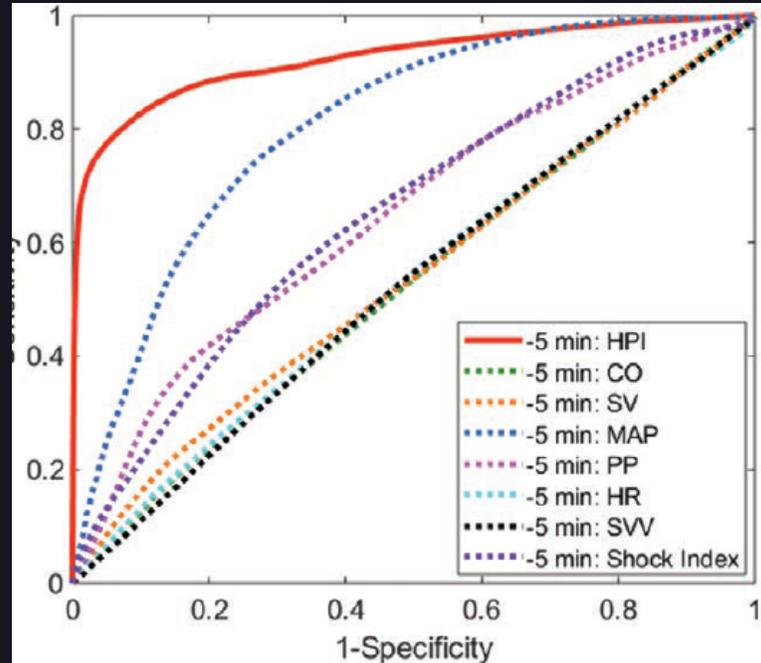

Performance of the **Hypotension Predictor Index (HPI)** for predicting arterial hypotension

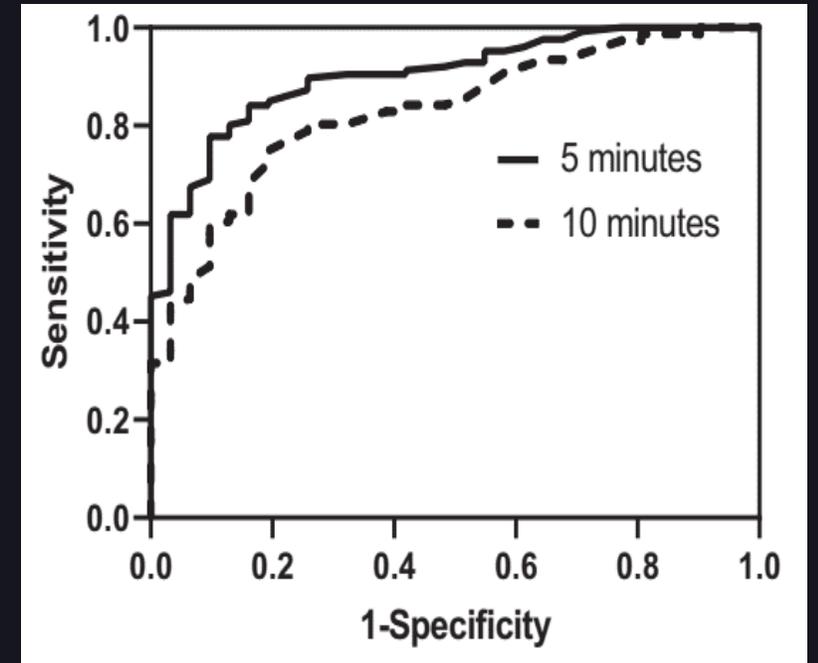

Hatib F *et al.* *Anesthesiology* 2018.

Internal validation (1334 patients)
External validation (204 patients)

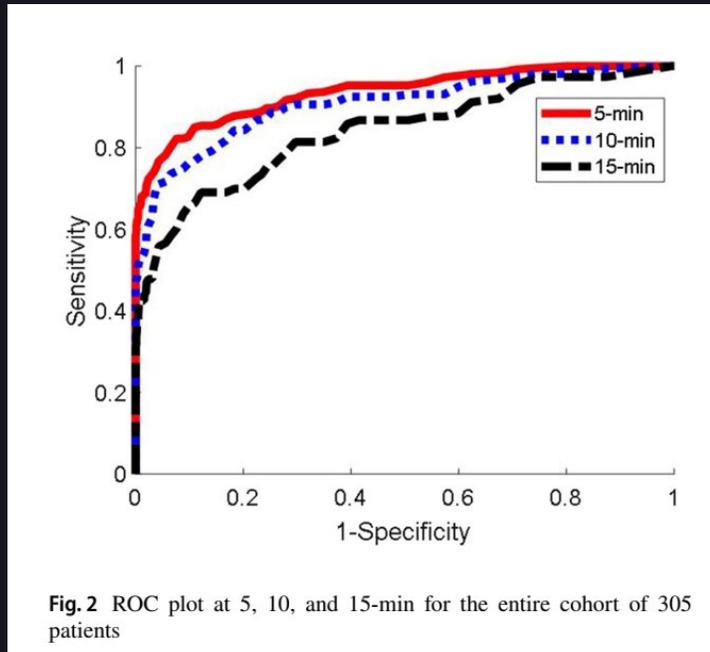

Davies SJ *et al.* *Anesthesia & Analgesia* 2020. Shin B *et al.* *J Cardiothorac Vasc Anesth* 2020 .

Retrospective analysis of 255 patients
undergoing major non-cardiac surgery.

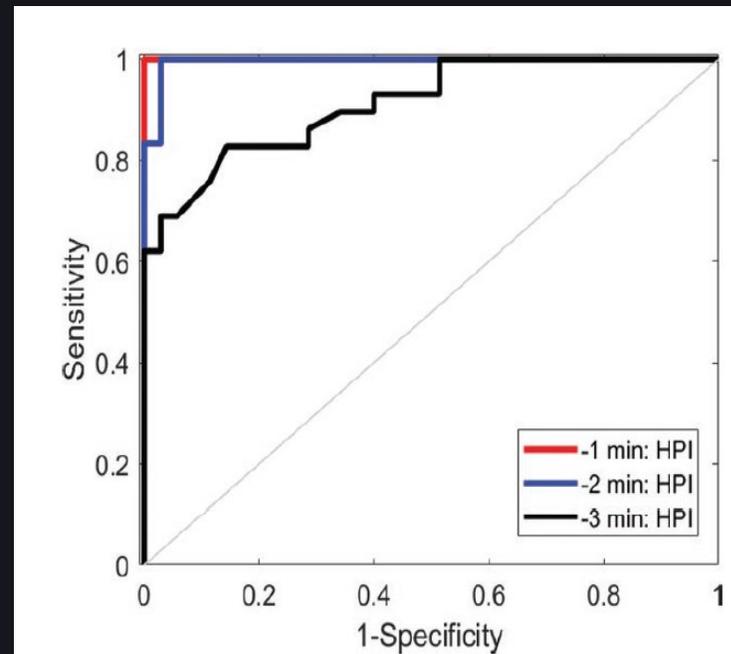

- Single-center prospective Study.
- 37 patients undergoing cardiac surgery (CBP, valve repair, aneurism repair...)

Performance of the non-invasive **HPI (ClearSight)** for predicting arterial hypotension

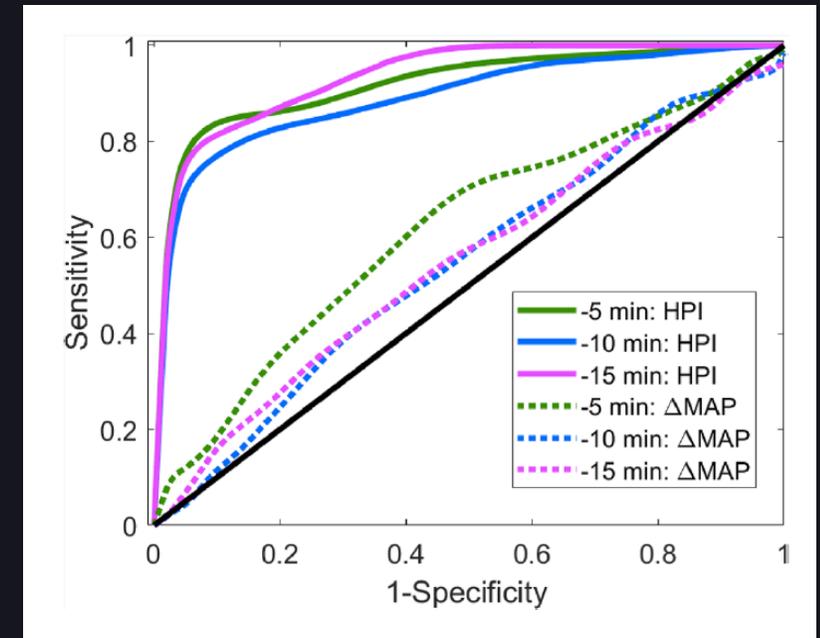

Maheshwarit K *al.* **J Clin Monit Comput** 2020 .

- Retrospective analysis of 305 adults patients undergoing to moderate-to-high risk non cardiac surgery.

Frassanito L et al. **Anesthesia & Analgesia**, 2021

- Retrospective analysis of 48 pregnant patients scheduled for elective cesarean under spinal anesthesia.

Frassanito L et al. **J Clinical Monitor and Comput**, 2021

- Retrospective analysis of 31 patients scheduled for Gynaecologic Oncologic Surgery.

HPI in ICU patients with COVID-19

Hypotension Prediction Index (HPI)

- Early predictor of arterial hypotension
- Hemodynamic instability index

Secondary Screen

- Underlying mechanism of the increasing hemodynamic instability
- Optimal therapeutic decision for preventing arterial hypotension

Physiological management of arterial hypotension

- **SVV**: dynamic index of preload (preload-responsiveness)
- **Arterial dP/dt_{max}**: LV contractility
- **Ea_{dyn}**: dynamic index of afterload (pressure responsiveness)

physiological management of arterial hypotension

SW

dPdt_{max}

Ea_{dyn}

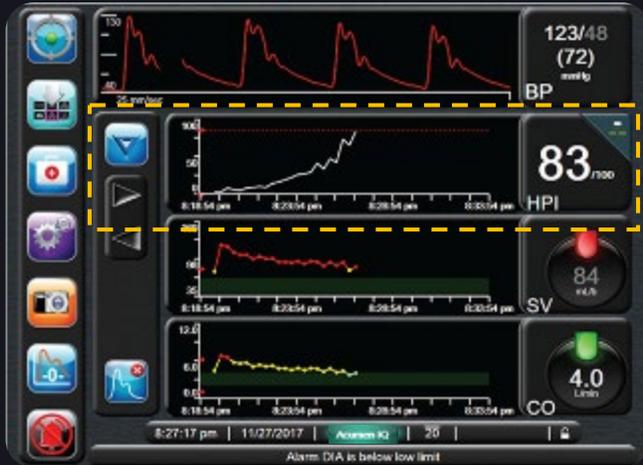

Acumen Hypotension Prediction Index Software

1

HPI parameter

Index value ranging from 0 to 100

Indicates likelihood a patient may be trending toward a hypotensive event

2

HPI high alert popup

Alerts clinician at preset threshold values

Alerts when patient is trending toward or experiencing a hypotensive event (90+% probability)

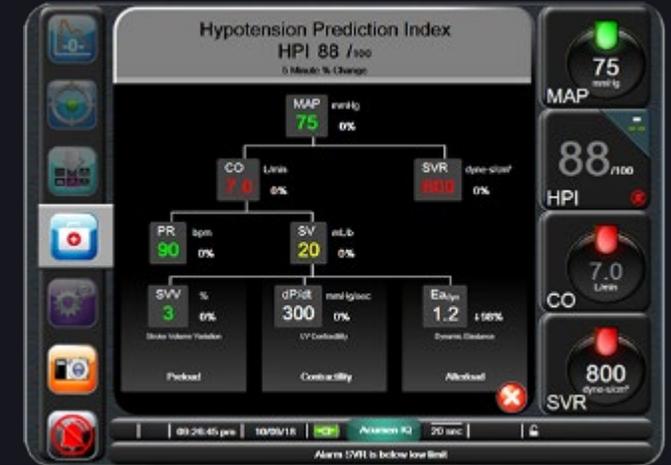

3

HPI secondary screen

Visually links pressure and flow parameters

Allow opportunity to investigate and identify the root cause of potentially developing hypotensive events
